

Features Wheel Loaders - 877III

Rated Power 216KW(290hp)

Operating Weight 23500+/-500kg

Rated Load 7000kg

ZF transmission electro-hydraulic shift system with neutral start-protection and neutral gear lock functions

ROPS/FOBS cab with 360o visibility equipped with electronic surveillance system and adjustable steering wheel

Cummins electronic diesel engine with low noise, low emission and high fuel efficiency meets EPA tier 2 standards

Integrated engine hood can be opened backwards

20,000 Wheel Loaders in 2006

Annual production and sales of LuiGong's Wheel Loaders reached 20,000 units in 2006, completely meeting the target established three years ago. LiuGong is now the number one producer and seller of Wheel Loaders in China.

The actual total produced was 20,175 units with sales of 20,180. In addition to meeting the production and sales targets, the division met all its profit and modernization targets as well. All in all, a most successful year for our largest product group.

Also in 2006, LiuGong's total production and sale of Wheel Loaders surpassed 110,000 units. Strong growth is predicted for our flagship product group in 2007. We continue to invest heavily in our research, design, development and manufacturing of Wheel Loaders to ensure this critical product group remains highly competitive in both the domestic and international markets.
